

ISCEV extended protocols: 2015 Update

The ISCEV Board encourages members to contribute to the development of new extended protocols. At the 2015 meeting of the ISCEV Board of Directors, the following eight protocols were approved for development as extended protocols (passed stage 1 – approval of concept acknowledging the need for specialized protocol), based on the 2012 membership survey of clinical ERG practice (<http://www.iscev.org/misc.html#erg-survey2013>).

- On and off ERG
- DA ERG luminance-response function
- S-cone ERG
- Photopic negative response
- DA red flash ERG
- LA ERG luminance-response function
- Saturated a-wave series
- Scotopic threshold ERG

Board member-at-large, Suresh Viswanathan, is co-ordinating the working groups. Please contact him for further information (sviswanathan@sunyopt.edu).
